Fig.4 Source csv file

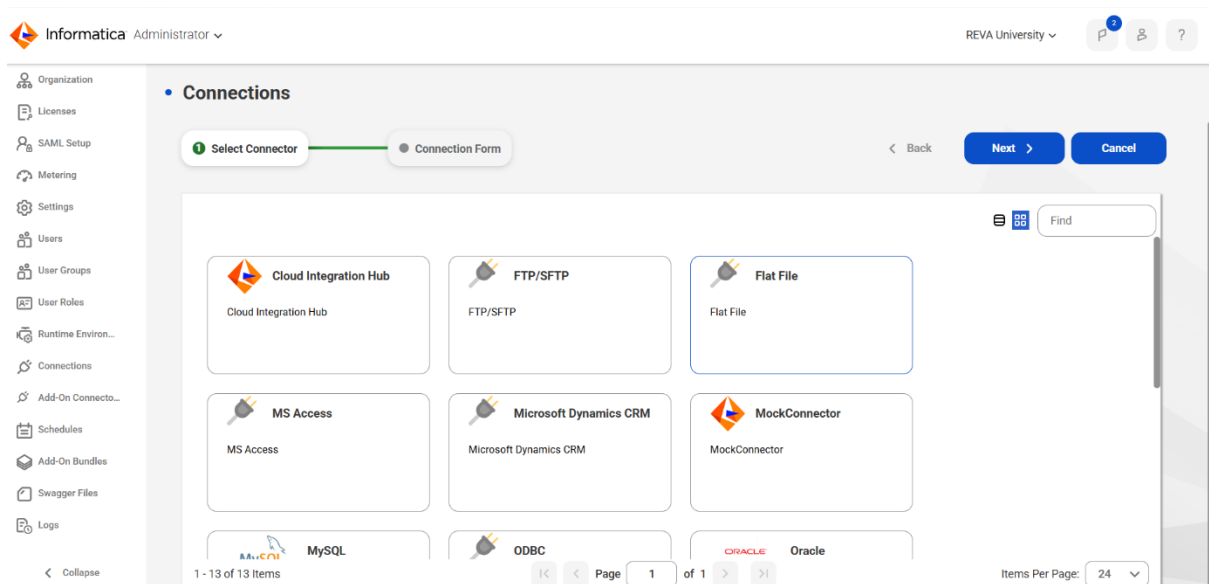

Fig.5 Create a new flat file

Informatica Administrator REVA University

Connections

Select Connector Connection Form

Configure Connection : Flat File
Follow the setup guide on the right to configure the connection

Connection Name: * Employee_source

Description:

Runtime Environment: * PC-JAY

Directory: * C:\Users\Secure agent\Source [Browse...](#)

Date Format: * dd/MM/yyyy HH:mm:ss

Code Page: * UTF-8

Flat file connection properties

Defines the properties you need to assign to for a flat file source connection. The following table describes the flat file connection properties:

Connection Name	Description
Connection Name	A name for the connection. This name must be unique within the organization. Connection names can contain alphanumeric characters, spaces, and the following special characters: _ , + - Spaces at the beginning or end of the name are

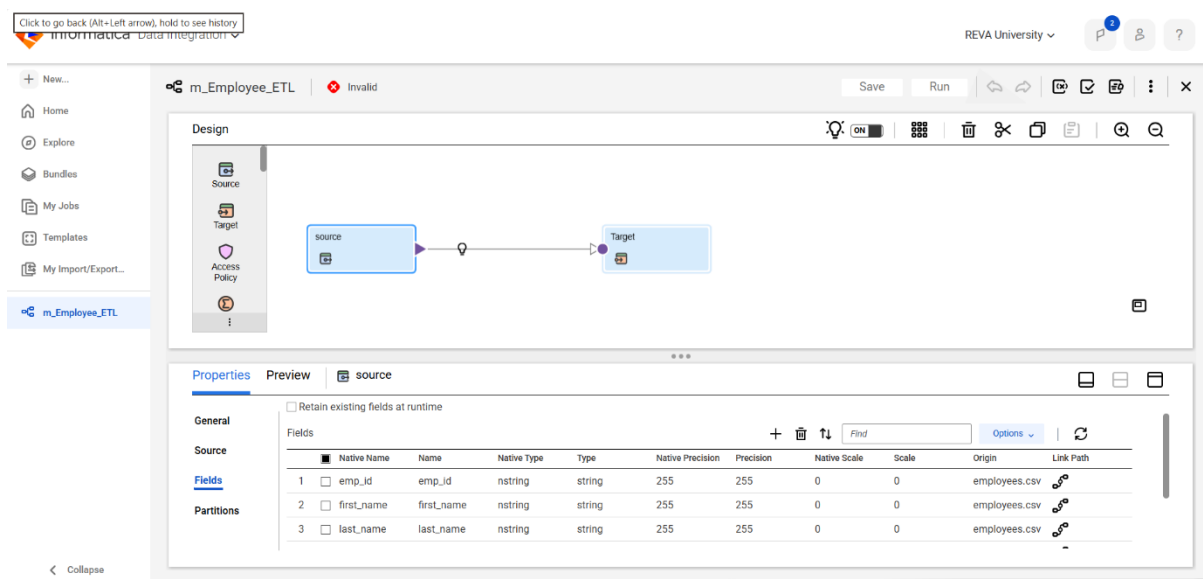

Fig.9 Navigated to Data integration service and created a new mapping using Transformation using Mapping

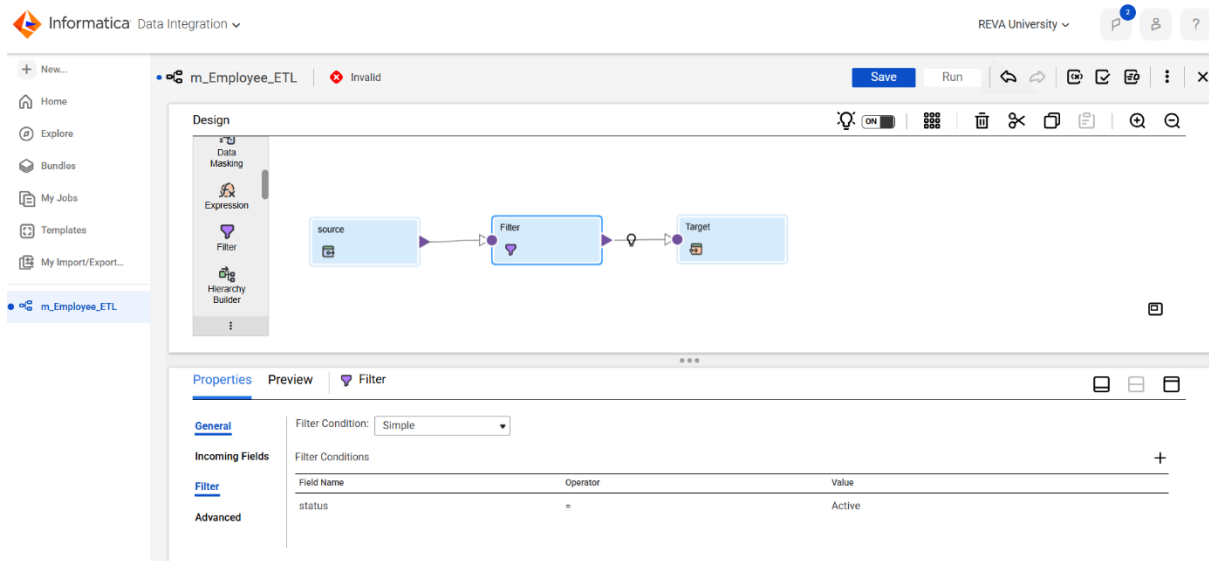

Fig.10 Filter was added for Status = 'Active'

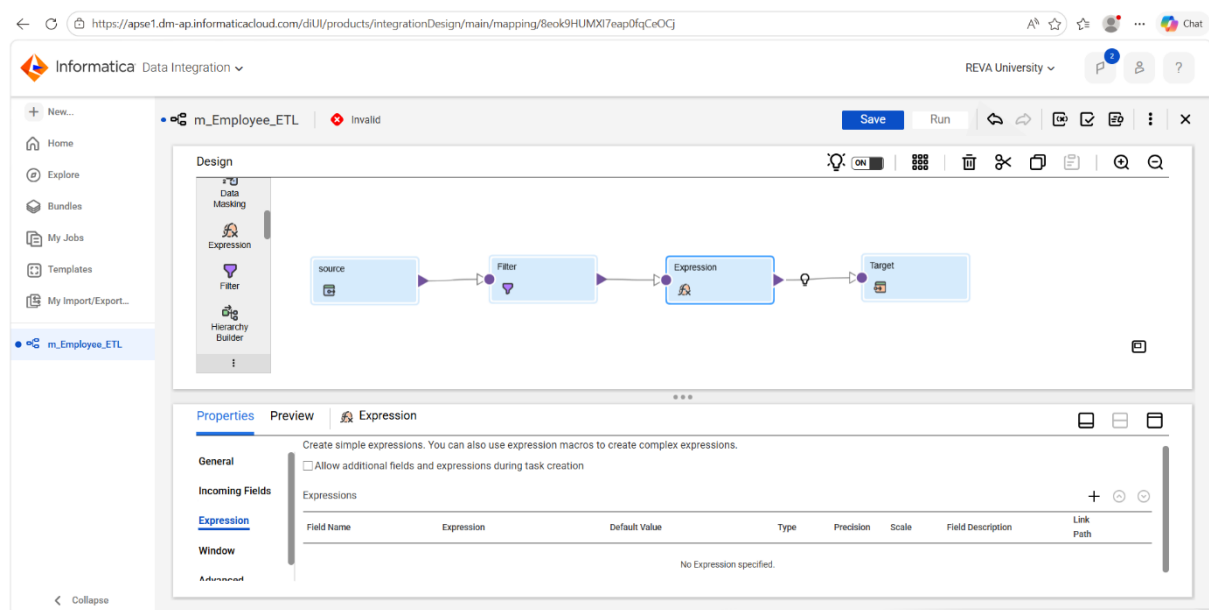

Fig.11 Expression was added for calculations for transformation of data

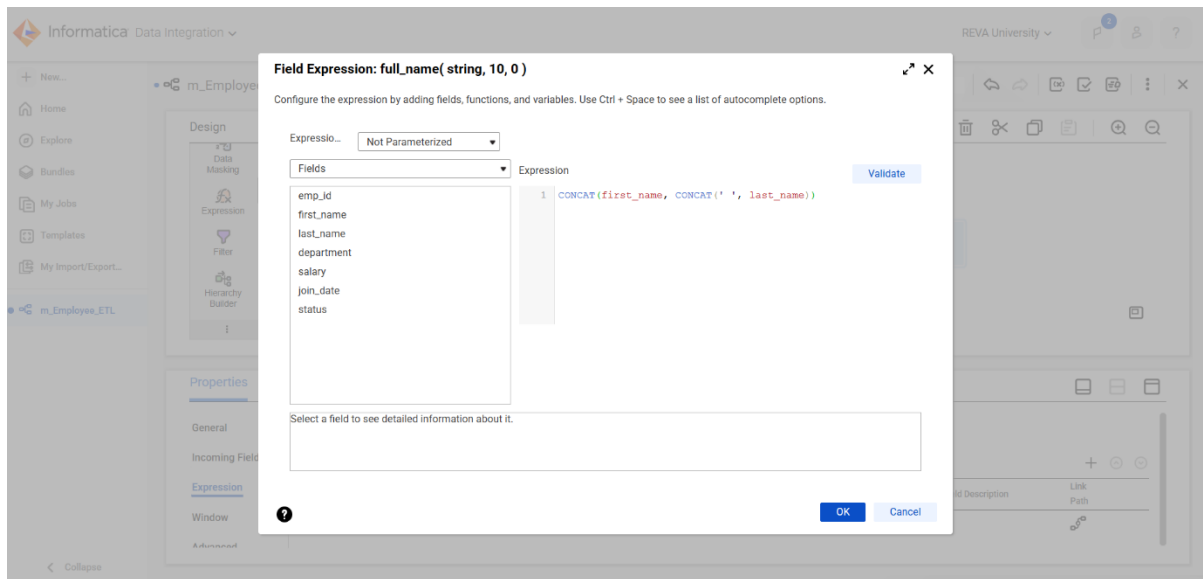

Fig.12 Experssion was added for concatenation

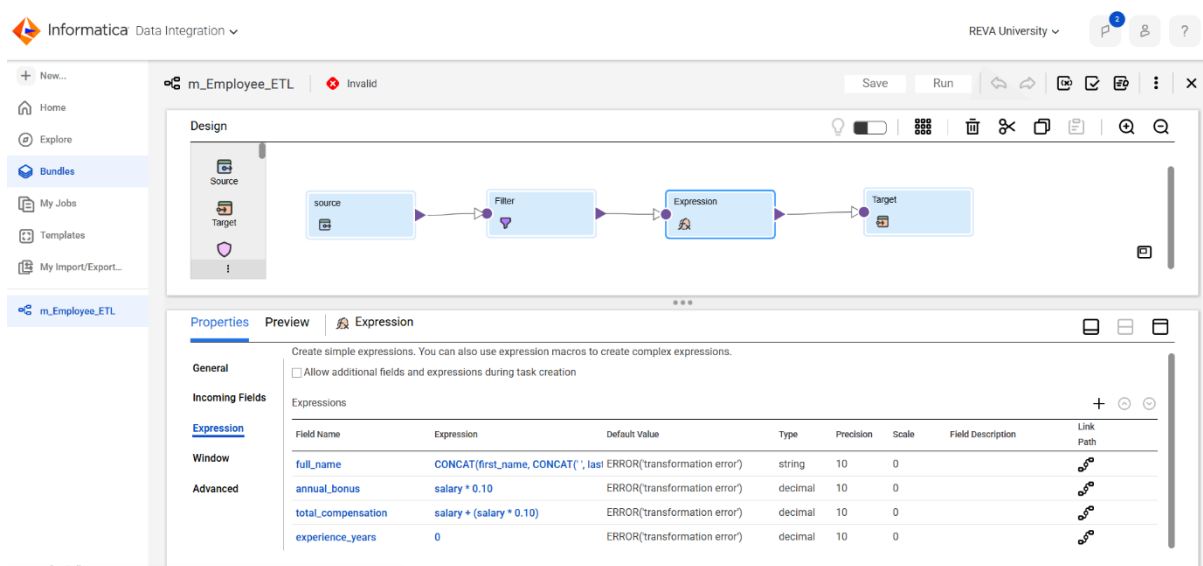

Fig.13 All expressions are added with the required calculations

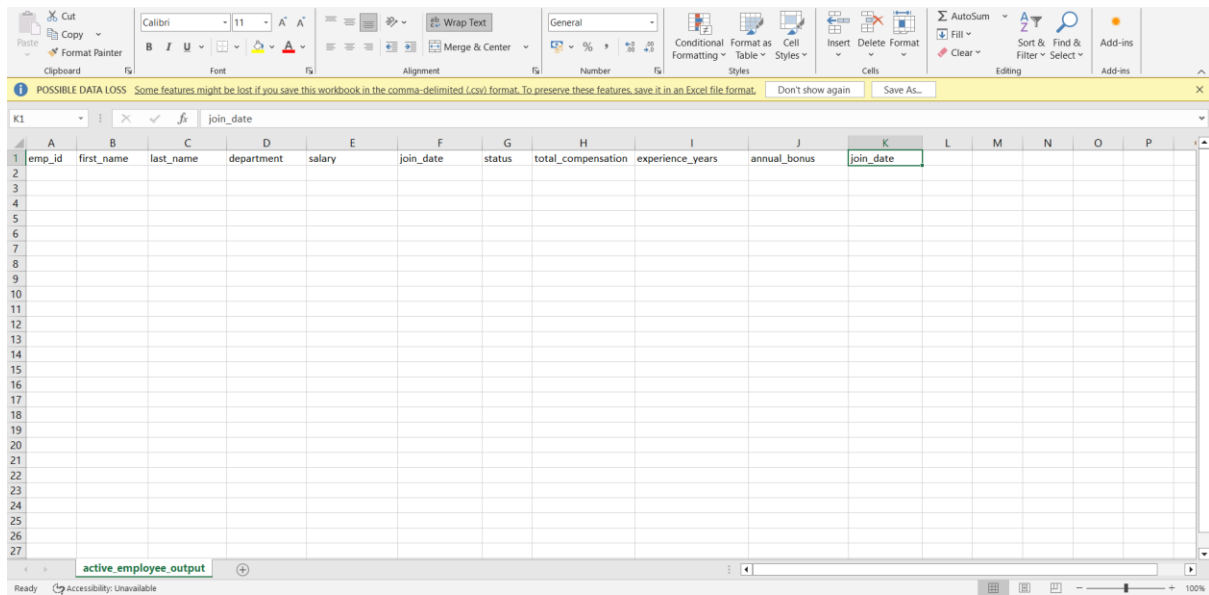

Fig.14 Empty output csv file with headers is created

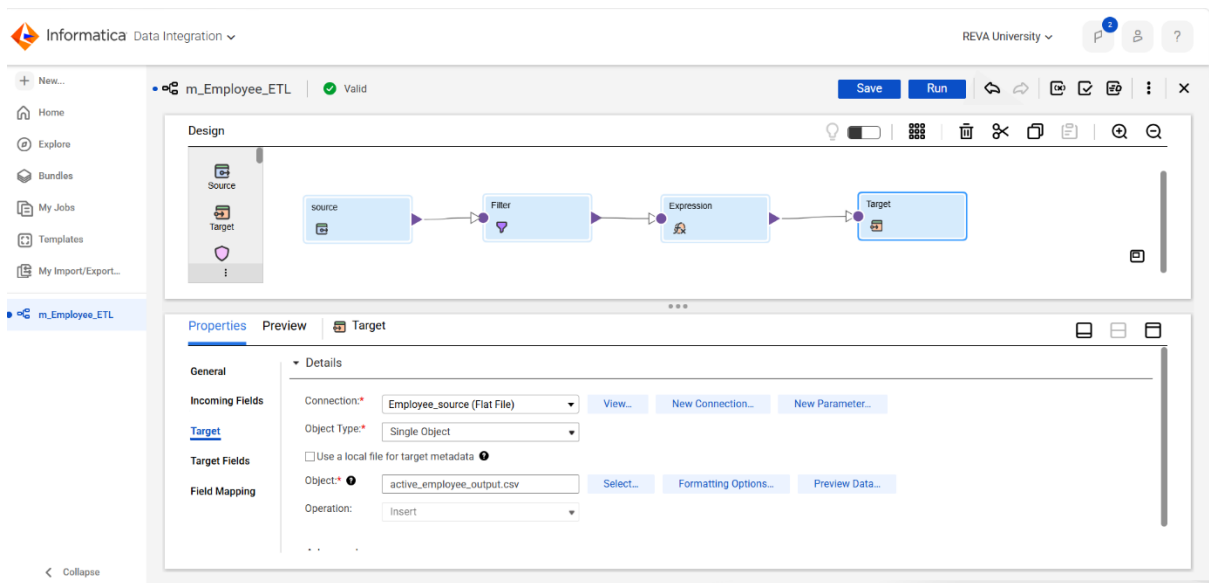

Fig.15 Target csv file is chosen

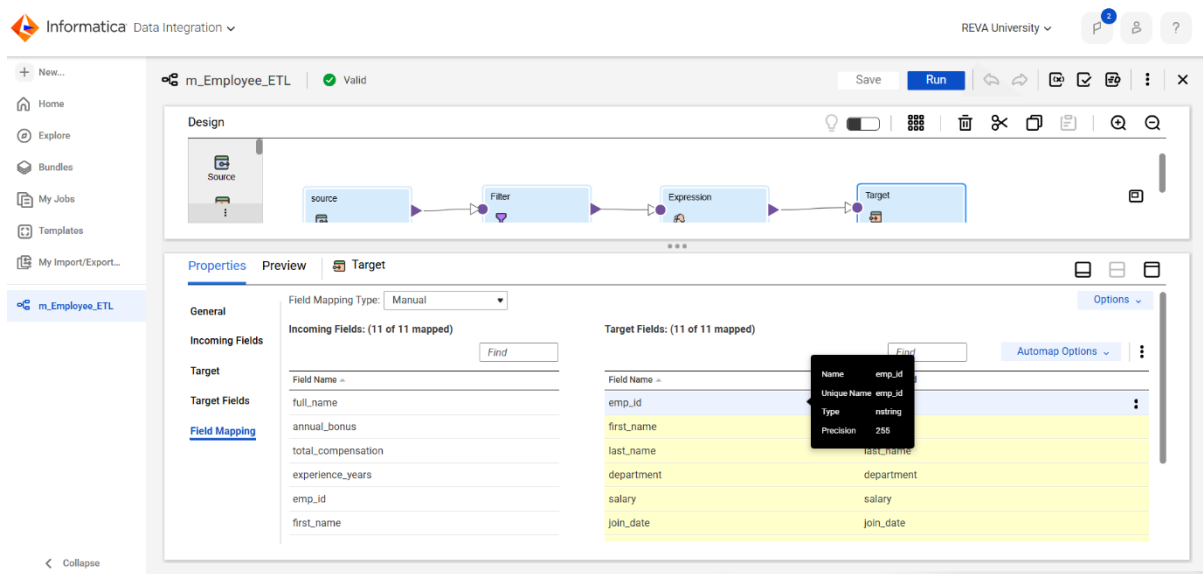

Fig.16 All fields are mapped to target file

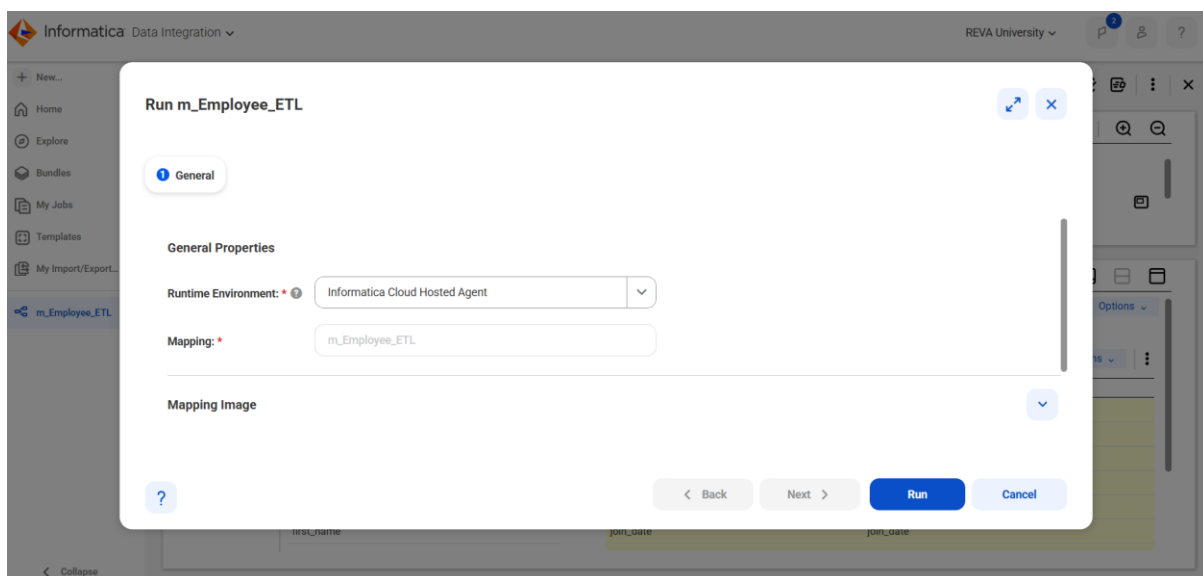

Fig.17 Mapping is to be run

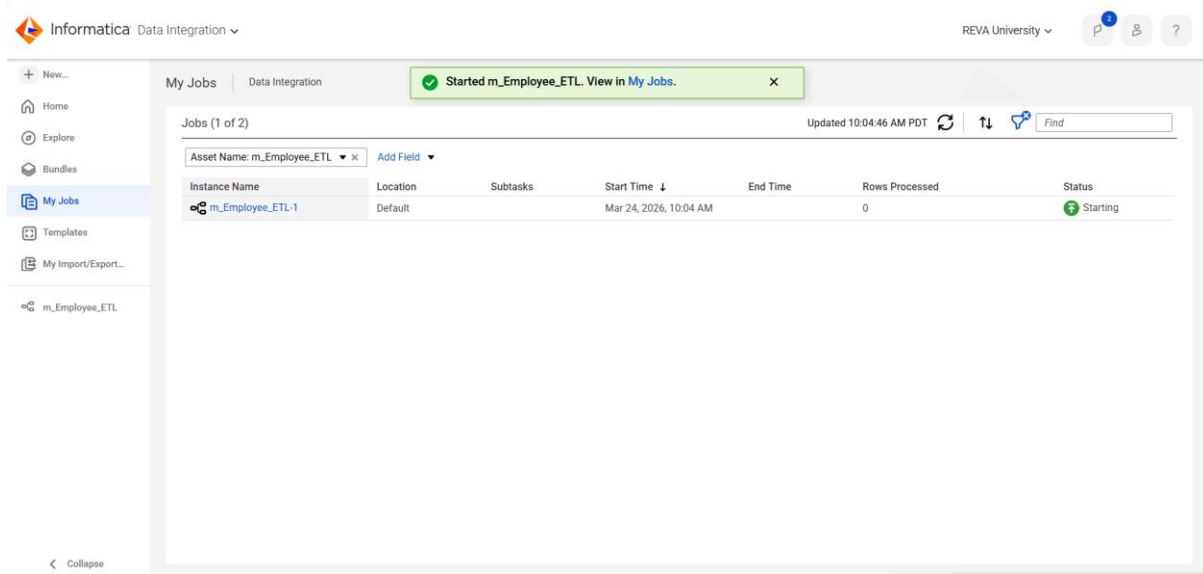

Fig.18 Job is started

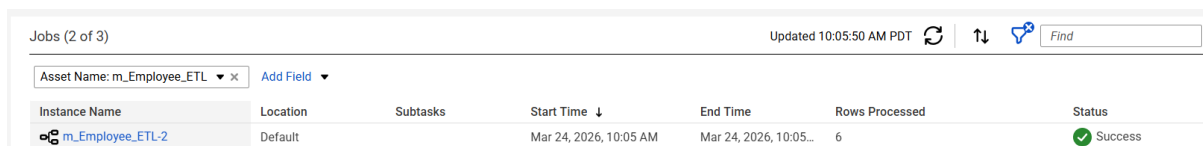

Fig.19 Job is executed successfully

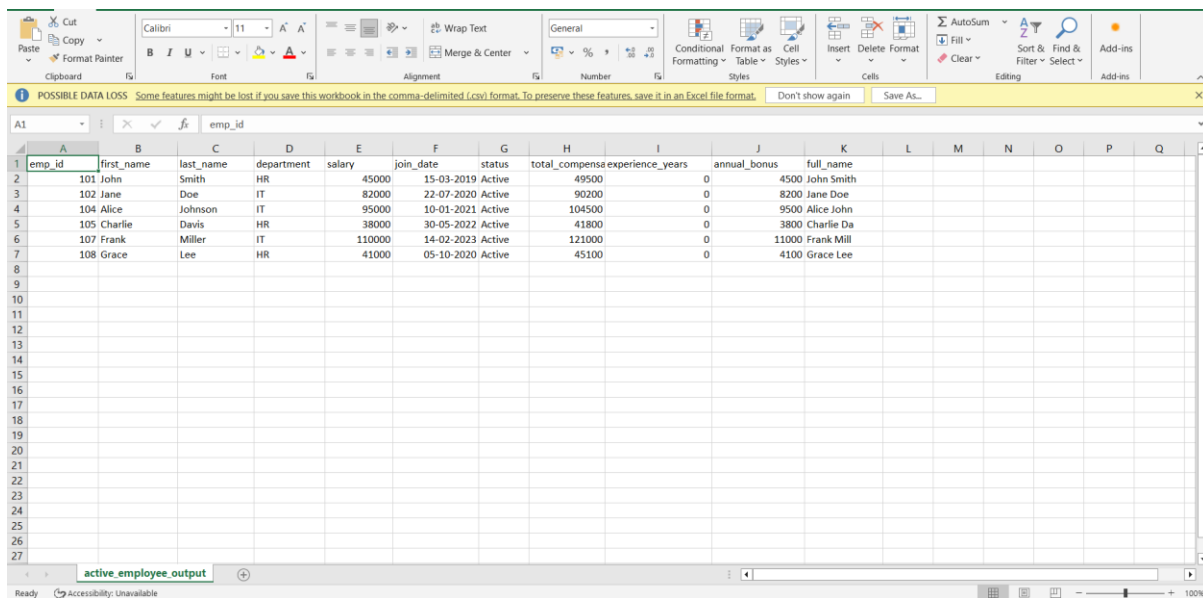

Fig.20 Output file is updated with transformed data

Summary:

The ETL pipeline has successfully transformed the data according to these rules:

- Only employees with active status shown
- Total compensation is calculated
- Full name is concatenated
- Annual bonus is calculated

Hence, the ETL data pipeline works as per settings.
